

HARRISON'S BIRD FOODS HOME REMEDIES

REMEDY	DOSE	INDICATIONS
APPLE CIDER VINEGAR (non-pasteurized, non-filtered, organic) With "mother" 	Add 1 Tbsp (15 ml) apple cider vinegar to 1 quart (approx. 1 L) bottled drinking water (not distilled or spring water). Use as the animal's only source of drinking water for 10-14 days. If the animal does not immediately drink the mixture, you can try diluting it further for 2-3 days, then return proportions to the recommended level.	Helps restore normal intestinal flora. Controls many GI gram-negative bacterial and yeast problems without medications in asymptomatic animals. Fecal Gram's stain should be rechecked after 10-14 days.
FAUNA FLORA (digestive aid) 	One pinch per day. Place over moistened food. Replace Fauna Flora and food daily.	For birds that are thin, wasting, young, sick, passing whole seeds, have slow-emptying crops and have suspected pancreatitis.
MILK THISTLE (alcohol-free) 	Mix 5 drops in 0.5 oz (15 ml) lactulose. Give the animal 1 drop orally per 100 grams body weight (twice a day.) Can be safely used for months.	Benefits may include detoxification and stimulation of the liver, improved circulation, and restoration of gastric balance after vomiting.
RECOVERY FORMULA (hand-feeding) 	Mix fresh: 1 part dry formula to 1-3 parts bottled "drinking water" heated to approximately 103°F (39°C). Do not microwave. Allow to cool to lukewarm.	For animals needing an easily assimilated source of nutrients. For medical and surgical patients that are recovering from pansystemic failure. For nutritional support during the transition phase of a diet change. For animals in which anorexia has slowed gastrointestinal emptying time.
STAY FRESH FOOD PRESERVER (nitrogen spray) 	Extend the shelf life of Harrison's Bird Foods after opening for 6 months by using Stay Fresh Food Preserver. Use on all your fresh fruits and vegetables too! Chop up fruits and vegetables as desired, transfer to a container and preserve with Stay Fresh to keep them fresh longer in the fridge and freezer.	The nitrogen gas in Stay Fresh replaces the oxygen in the packaging. It is oxygen that is responsible for oxidation and spoilage of food. Stay Fresh can be used in multiple situations to retain freshness.
GEORGE'S ALOE VERA (drinkable) 	For Oral Solution and Topical Application: Mix 2 Tablespoon George's Aloe Vera juice with 1 pint (2 cups) trusted drinking water (RO, filtered, etc.) Oral Solution: Use as drinking water for birds needing support in fighting any illness or high stress situation; it is especially effective for GI upsets of any kind. Topical Application: Mist 3x times daily with fine sprayer.	Oral solution: Benefits emotionally stressed birds, feather pickers and birds needing an immune tonic. Is an anti-inflammatory agent. Treats constipation, controls blood sugar levels and is a source of vitamin C. Topical application: Reduces postoperative pain. Provides wound healing support. Inhibits infectious diseases by stimulating the cells in the host defense mechanism. Increases re-epithelialization in burn wounds.
BOOSTER CONCENTRATE 	Prophylactic Treatment: Under 100 g - ¼ pellet 500 g (1.1lb) - ½ pellet 1 kg (2.2lb) - 1 pellet In the event of infection, the dosage may be increased up to fourfold, as clinically indicated.	A nontoxic antimicrobial dietary supplement. See reverse side for additional information.

If clinical signs persist for longer than 1 week or worsen at any point it is advised to seek veterinary care for further advice.
